

DevOps | 29/10/25

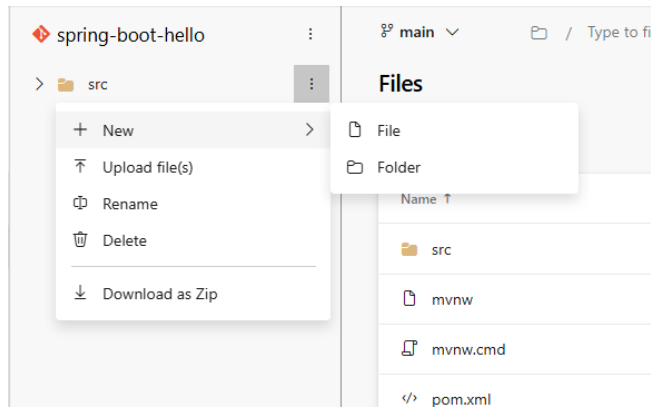

Exemplo Sprint 4 CI/CD utilizando web app e container registry

- Importando um repositório

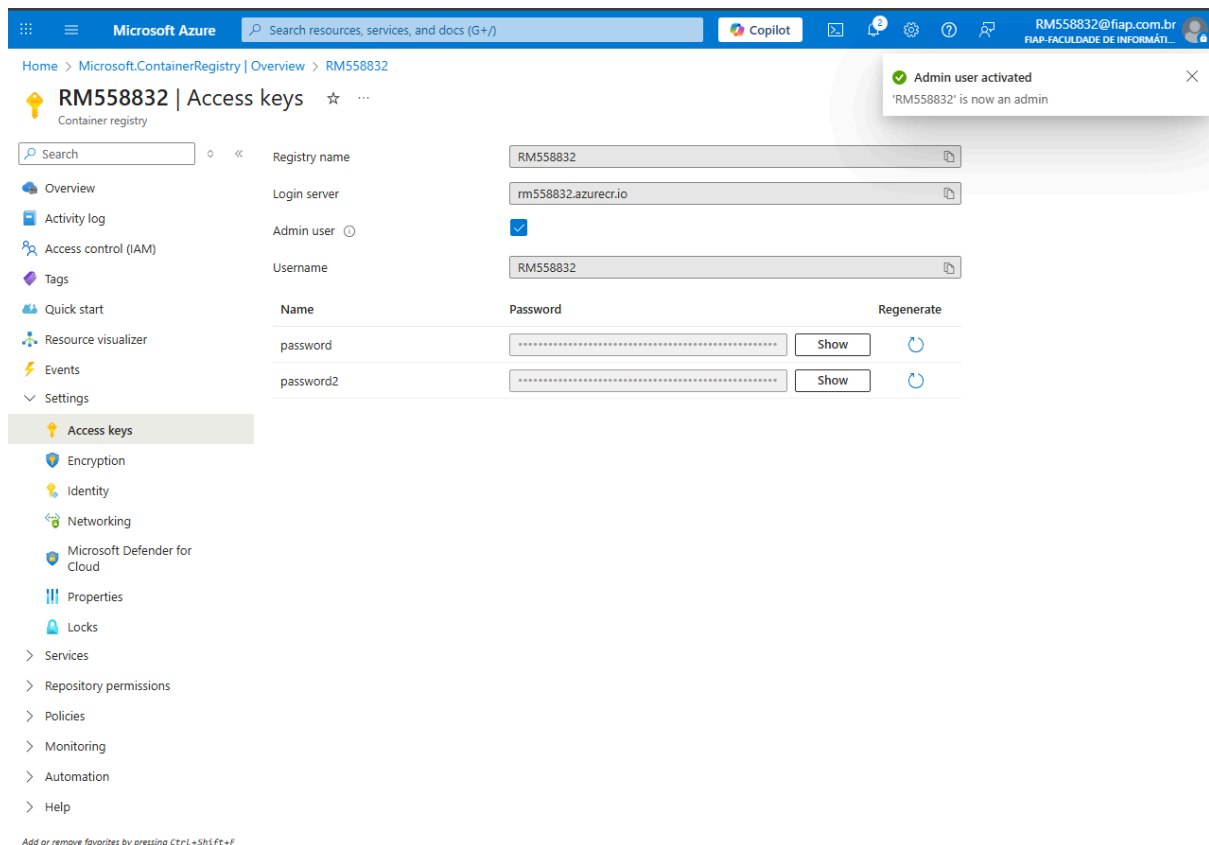

link do repositório: <https://github.com/profjoaomenk/spring-boot-hello.git>

Criar o dockerfile

Container Registry

precisa habilitar o “Admin user” no container registry, pois ele dá erro quando vou criar um web app com container, utilizando esse registry com as credenciais de admins, se não deixar marcado dá erro de credenciais
→ ou seja, se não tiver ativo, não consigo me conectar via admin no web app (com container) com o tipo admin.

Criar o web app com “quickstart” (se não tiver imagem)

Microsoft Azure

nome da imagem:

Image name * ⓘ

`$(Build.Repository.Name):$(Build.BuildNumber)`

por que?

Identificação Única: O nome inclui o nome do repositório e o número do build, garantindo uma identificação única da versão da imagem.

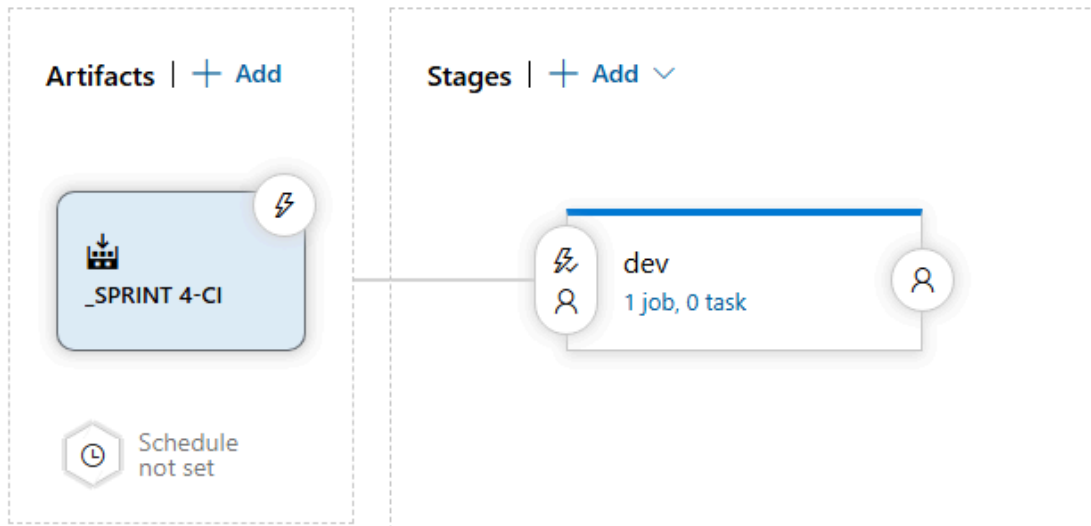

Rastreamento e Versionamento: Facilita o rastreamento de qual código gerou qual versão da imagem.

Evita Sobrecrições: O número do build garante que as imagens não sobrescrevam versões anteriores, criando uma versão distinta para cada execução do pipeline.

Fazendo deploy com a release (CD) - subindo a imagem no web app,
com o container registry

Startup command ⓘ

Site Containers Config ⓘ

1º task: Azure Web App for Containers

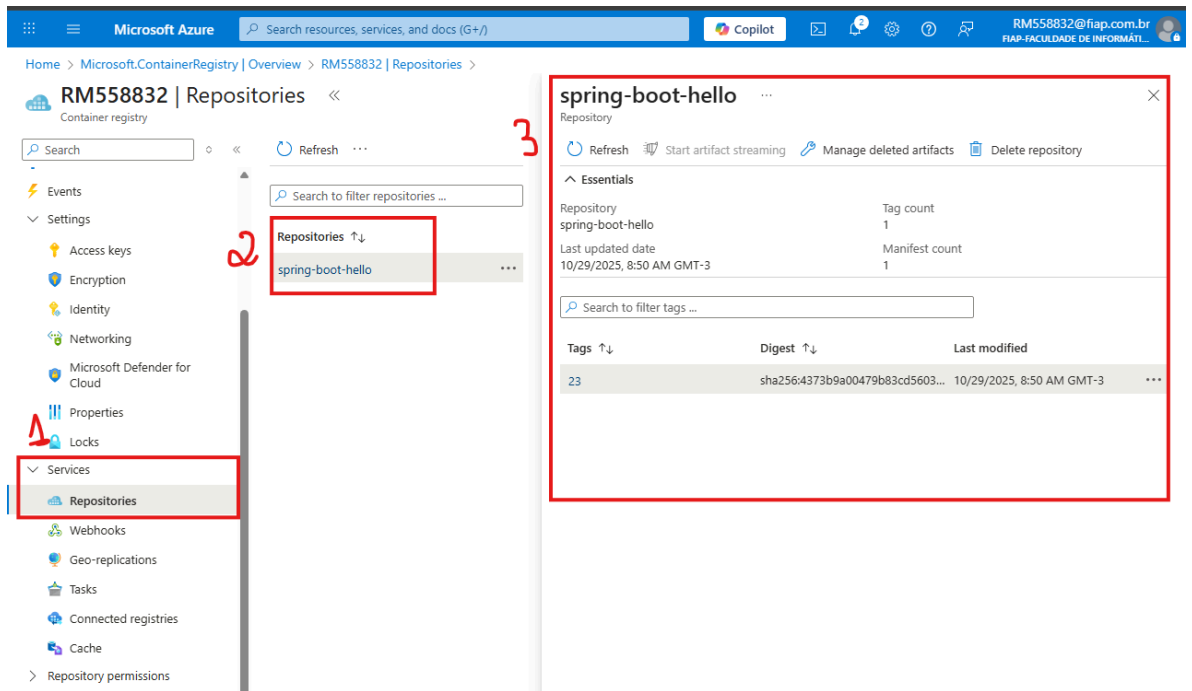

- configurar com sua subscription e app name (do web service, com container)
- na image name, já que na pipeline configuramos para a imagem subir com o nome da versão da pipeline, devemos passar a mesma coisa para essa task de subir para o web app do container

Image name ⓘ

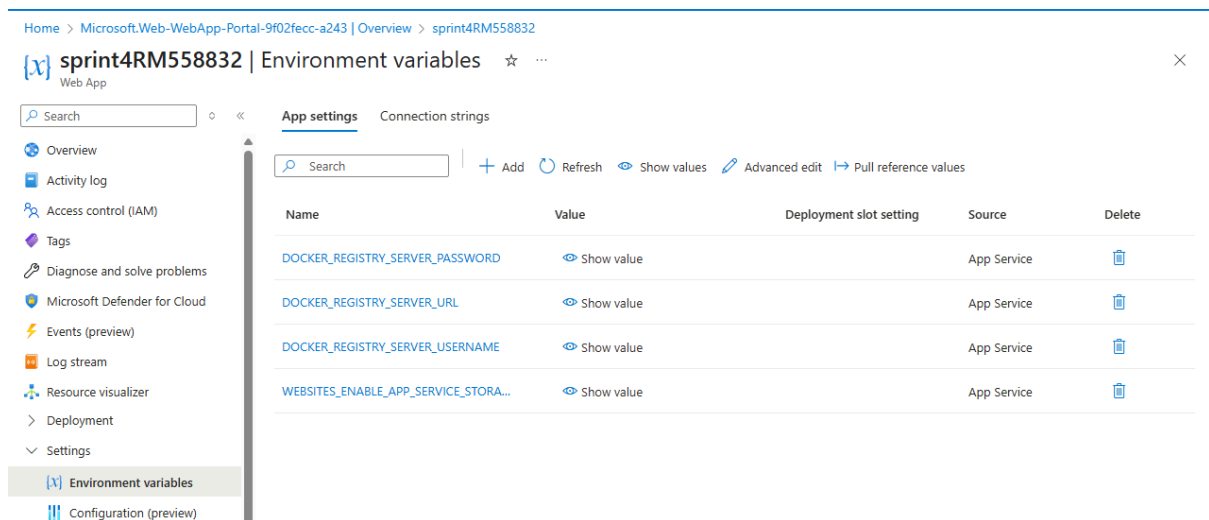

rm558832.azurecr.io/\$(Build.Repository.Name):\$(Build.BuildNumber)

inicia com o
endereço_do_container_registry/variaveis_que_trarão_a_versao_da_pipeline

- Para ver as tags e images que a pipeline subiu

variáveis que tenho no web app (criadas automaticamente, ao escolher container - ao invés de código)

2° Rodar o CD

irá dar erro, pois o web app leva um unauthorized do container registry

(as variáveis já existem, eu só atualizo ela com os valores do meu registry)

Como obter as informações no container registry

The screenshot shows the Microsoft Azure portal interface. The top navigation bar includes the Microsoft Azure logo, a search bar, and a Copilot button. The breadcrumb trail indicates the current location: Home > Microsoft.ContainerRegistry | Overview > RM558832. The main heading is 'RM558832 | Access keys'. The left sidebar contains a search bar and a list of navigation items: Overview, Activity log, Access control (IAM), Tags, Quick start, Resource visualizer, Events, Settings (highlighted with a red box), Access keys, and Encryption. The main content area displays the 'Access keys' page for the container registry 'RM558832'. The page includes the following fields:

- Registry name: RM558832
- Login server: rm558832.azurecr.io
- Admin user: ☒
- Username: RM558832

Below these fields is a table of access keys:

Name	Password	Regenerate
password	X3FZwflNcrZAtx84Xn/ZxfoqSQUF/gmSaP1...	<button>Hide</button> <button>Regenerate</button>
password2		<button>Show</button> <button>Regenerate</button>
